

Double Deflection Register

Description

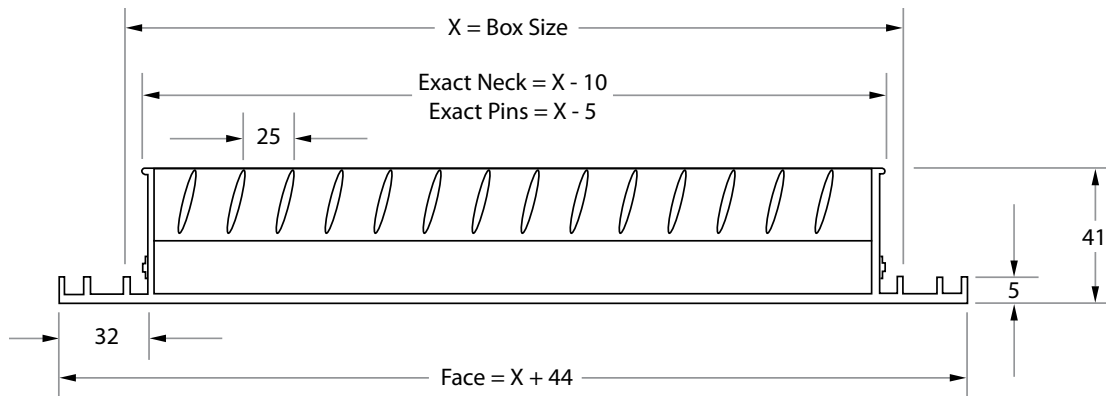

For supply air, having a double set of fully adjustable blades to give directional control of the air pattern in four directions if required. Suitable for wall and duct mounting. Also available with curved face for circular duct installations as well as removable core for ease of installation. Removable Core not available on curved face registers.

Construction

From extruded aluminium sections, ensuring functional strength and performance that also gives an attractive and aesthetically pleasing appearance. Incorporating two sets of individually adjustable blades, the front blades may be set either horizontally or at angles either up or down. Rear blades are adjusted in a similar way but only in a vertical plane. Powder coated white as standard with optional colours and finishes available on request.
