

Removable Core Weatherproof Louvres

Description

Suitable for both intake and return air applications. Quick release removable core provides easy access to rear and concealed fixing facilities and ease of installation. The Louvre blades offer a double weather stop design making it a unique and efficient solution in providing weather protection. Wide blade spacings enable improved airflow with reduced pressure drops and noise levels. The custom manufactured range offers blades set at 48mm centres.

Size

Available up to and including 2400mm perimeter range. To calculate the perimeter range for an RCWPL 600 x 600, see example below.

Example: $600 + 600 + 600 + 600 = 2400$ Perimeter

Construction

From high quality extruded aluminium sections. Hairline mitres are mechanically held for maximum strength and durability. Finished in natural anodised aluminium as standard with optional powder coated colours and finishes available on request. Free areas range between 40% and 76%.

Selection Data:

NC levels and pressure drops are given for louvres mounted in a sidewall at least 1200 mm up from the floor level. Results were obtained at Isothermal conditions. For other performance or selection details please contact the supplier.
